Proback Transport Swabs

Complete sampling kit for timed transport of all types of Microorganisms to the laboratory. Amies Clear medium gives up to 24 hours survival and is ideal for microscopy work. Amies Charcoal medium gives up to 48 hours for transport since the activated charcoal component absorbs toxic metabolites away from the sample.

Amies Liquid medium is ideal for maintaining the viability of aerobic, anaerobic and fastidious bacteria for up to 48 hours.

A choice of swab buds including synthetic and natural materials allows the user to tailor cost and performance. Gamma irradiated to SAL 10⁻⁶ for guaranteed sterility.

Please check the TSC website for individual product information including guidance for use, applications and limitations.
